                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Consideration of the protein and around solution of the sequence, whereas clone alpha22 contained sequence encoding amino acids 171-1454 of the protein and around 500 bp of the 3 untranslated region.

Construct composite sequences encoding variant collagen molecules.

The 2 clones were used to generate a number of fragments which were used to construct composite sequences encoding variant collagen molecules.

The fragments are: (A) containing nucleotides (nt) -4 to 479;

Co (pathogenesis-related protein ) Signal peptide and bases 66.77 from the sequence encoding the N-terminus of the pro-collagen amino propeptide domain; (C) the whole of the amino propeptide domain (nt 72-479); (D) all containing TAA upstream of the pro-collagen amino propeptide domain; (C) the whole of the amino propeptide domain (nt 72-479); (D) all containing the N-terminus of the DrazIII-BamHI fragment

Co f the amino-telopeptide domain (nt 474-534) and the N-terminus of the helicoidal region (nt 53-1920); (E) the DraIII-BamHI fragment

Co f the BamHI-ECORI (2803-4362) region of alpha22, encoding as 396-1192 in the central helicoidal domain and as 1193-144 in the containing the C-terminus of the C-propeptide domain; (C) the C-terminus of the C-propeptide domain; (G) the contrained of the contrained
Disclosure; Fig 7; 138pp; French.
The invention relates to the production of mammalian collagen in plants.
2 clones: alpha3 and alpha22, spanning the human collagen type I gene were isolated from a MG-63 costeosarcoma library. Clone alpha3 contained 83 bp of the 5' untranslated region and the first 1920 bp of coding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ဍ

Trong its precursor - identified using TNF convertase, e.g.

from its precursor - identified using TNF convertase, e.g.

Trom its precursor - identified using TNF convertase, e.g.

Trom its precursor - identified using TNF convertase, e.g.

Trom its precursor - identified phosphonate(s), for preventing

Trom treating sepsis, AIDS, auto-immune disease etc.

Disclosure; Fig 2; 69pp; English.

ProTNF refers to TNF having a molecular weight of about 26,000,

Which is the prohomone form of TNFa. ProTNF is cleaved to a lower

Consully trimeric) form, is substantially involved in producing life-

threatening physiological changes associated with sepsis. ProTNF is

cleaved by convertase. One TNF convertase is serine protease

proteinase-3, also called PR-3, P-29B or myeloblasin. A suitable

source of convertase is the HL60 cell line (or extracts, or the

culture media in which it is grown). The convertase produced by

Culture media in which it is grown). The convertase produced by

Serine protease PR-3 which has other activities unrelated to TNF

                                                                                      2
Claim 2; Columns 43-60; 68pp; English.#
The present sequence is a protein (OA-519) cross-reactive with the haptoglobin related (hpr) gene product. OA-519 can be used raise antibodies reactive with epitopes found on the hpr gene product, but not on haptoglobin 1 or 2, useful in cancer, sepecially breast cancer, prognosis assays.
                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

Variance 48.443; scale 0.652 Mean 31.574; Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Copper-zinc superoxide dismutase of Haemophilus influenzae and H.
"Copper-zinc superoxide dismutase of Haemophilus influenzae and H.
parainfluenzae.";
J. BACTERIOL. 173:7449-7457(1991).
-!- FUNCTION: DESTROYS RADICALS WHICH ARE NORMALLY PRODUCED WITHIN THE
CELLS AND ARE TOXIC TO BIOLOGICAL SYSTEMS.
-!- FUNCTION: MAY CONFER SURVINAL ADVANTAGE BY ACCELERATING
DISMUTATION OF SUPEROXIDE OF ENVIRONMENTAL ORIGIN TO HYDROGEN
PEROXIDE, DISRUPTIVE TO THE NORMAL MUCCCILIARY CLEARANCE PROCESS BACTERIA; PROTEOBACTERIA; GAMMA SUBDIVISION; PASTEURELLACEAE; HAEMOPHILUS. 01-MAY-1992 (REL. 22, CREATED) 01-MAY-1992 (REL. 22, LAST SEQUENCE UPDATE) 15-DEC-1998 (REL. 37, LAST ANNOTATION UPDATE) SUPEROXIDE DISMOTASE [CU-2N] PRECURSOR (EC 1.15.1.1). HAEMOPHILUS PARAINFLUENZAE SEQUENCE FROM N.A. PADDDARKEN PROCESS OF THE FEATURE OF

IN THE HOST

-:- CATALYTIC ACTIVITY: 2 PEROXIDE RADICAL + 2 H(+) = O(2) + H(2)O(2).
-:- SUBUNIT: HOMODIMER.
-:- SUBCELLULAR LOCATION: PERIPLASMIC (POTENTIAL).
-:- SIMILARITY: BELONGS TO THE CU-2N SUPEROXIDE DISMUTASE FAMILY.

FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.
IT BINDS TO THE E2RE RESPONSE ELEMENT (5'-ACCNNNNNGGT-3') PRESENT
IN MULTIPLE COPIES IN THE REGULATORY REGION. IT CAN EITHER
ACTIVATE OR REPRESS TRANSCRIPTION DEPENDING OF E2RE'S POSITION
WITH RECARDS TO PROXIMAL PROMOTER ELEMENTS. REPRESSION OCCURS
BY STERICALLY HINDERING THE ASSEMBLY OF THE TRANSCRIPTION
INITIATION COMPLEX. THE E1-E2 COMPLEX BINDS TO THE ORIGIN OF DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PAULEY A.;
SUBMITTED (JUL-1995) TO EMBL/GENBANK/DDBJ DATA BANKS.

-!- FUNCTION: NEWATODE CUTICLES ARE COMPOSED LARGELY OF COLLAGEN-LIKE
PROTEINS. THE CUTICLE FUNCTIONS BOTH AS AN EXOSKELETON AND AS A
BARRIER TO PROTECT THE WORM FROM ITS ENVIRONMENT.

-!- SUBUNIT: COLLAGEN POLYPEPTIDE CHAINS ARE COMPLEXED WITHIN THE
CUTICLE BY DISULFIDE BONDS AND OTHER TYPES OF COVALENT CROSS-
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The HFGAN72 receptor protein contains two ligands whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulimia, cachexia, chronic renal failure, remain disease, congestive heart failure, impaired glucose tolerance and sexual disease, congestive heart failure, impaired glucose tolerance and sexual disease, congestive heart failure, impaired glucose tolerance and sexual disease, in the HFGAN72 receptor ligand is useful for treating e.g. batterial, fungal, protozoan and viral infections, particularly infections caused by HTV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthm, parkinson's disease, both acute and congestive heart failure, hypotension, hypotension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign prostatic hypertrophy, chronic renal failure, renal disease, impaired glucose tolerance, sexual dysfunction and psychotic and neurological disorders including anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Glial cell line-derived neurotrophic factor receptor gamma 1.

Claim 5: Fig 4: 35pp: English.

Claim 5: Fig 4: 35pp: English.

The HFGANZ receptor protein contains two ligans whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulimia, cachexia, chronic renal failure, renal disease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGANZ receptor ligand is useful for treating e.g. bacterial, fungal, protezoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, parkinson's disease, both acute and congestive heart failure, asthma, pertoris, myocardial infarction, ulcers, asthma, allergies, benign pectoris, myocardial infarction, ulcers, asthma, allergies, benign construction processing pertorion; and dysfunction and psychotic and neurological disorders including anxiety, schizophrenia, manic depression, delirium, demential, severe mental retardation and dyskinesias such as Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                02-0CT-1998 (first entry)

Human HFGAN72 receptor protein.

HFGAN72 receptor; eating disorders; renal disease; heart failure; sexual dysfunction; HIV; cancer; Parkinson's disease; urinary retention; osteoporosis; angina pectoris; myocardial infarction; psychotic disorder; neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Human GDNF alpha-3 receptor protein #1.

Glial cell line-derived neurotrophic factor alpha-3 receptor; GDNF;

treatment; neurodegenerative disasse; Parkinson's Disease; ALS; SMA;

amyotrophic lateral sclerosis; spinal muscular atrophy; nerve; trauma;

Huntington's Disease; Alzheimer's Disease; diabetic neuropathy; muscle;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28-SEP-1998 (first entry)

Human GDNF alpha-3 receptor protein #2.

Glial cell line-derived neurotrophic factor alpha-3 receptor; GDNF;

treatment; neurodegenerative disease; Parkinson's Disease; ALS; SNA,

amyotrophic lateral sclerosis; spinal muscular atrophy; nerve; trauma;

Huntington's Disease; Alzheimer's Disease; diabetic neuropathy; muscle;

muscular dystrophy; diagnostic.
                                                                                                                                                                                                                                                                                                             This sequence represents a novel glial cell line-derived neurotrophic factor alpha-3 receptor (GDNF alpha-3). This protein can be used to frreat e.g. neurodegenerative diseases (such as Parkinson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SMA), Huntington's Disease, Alzheimer's Disease, diabetic neuropathy), muscular diseases (including the muscular dystrophies) and nerve and sequence 400 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New factor alpha 3 receptor polypeptide and e.g. DNA and agonists used to treat neuro degenerative diseases, muscular diseases and nerve and muscle trauma and in diagnostic assays claim 13; Fig 4; 22pp; English.

Claim 2: Page 85-86; 113pp; English.

This amino acid sequence comprises human Ret ligand (RetL) RetL3, and conducted from a adult heart and cond controls. Ret and human RetL1, human RetL2 and mouse RetL3 sequences (see W07457-62) are also claimed. Human RetL3 is 3.3% identical to human RetL1, 34.9% identical to human RetL3. RetL3 and 76.8% identical to murine RetL3. Ret ligand is a key component of the Ret signalling pathway that specifically interacts with Ret receptor protein, triggering Ret dimerisation and/or autophosphorylation of the Ret tyrosine kinase domain. Vectors containing retL3 DNA and prokaryotic or eukaryotic host cally transformed or transfected with these vectors are claimed, as well as a method for production of RetL3, its soluble variants and fusion proteins with a toxin, imageable compound or radionuclide. RetL3, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in renal failure, nephritis, kidney transplants, toxic or hypoxic injury, neurodegeneration, moctor neurone disease, multiple sclerosis, bacterial, viral or prion infections (e.g. meningitis, myelopathy associated with HIV or creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental disorders such as Down's syndrome system (Lyme disease, muscular dystrophy and myasthenia gravis).

Fusion proteins are used to deliver toxins etc. to Ret-expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
This sequence represents a novel glial cell line-derived neurotrophic factor alpha-3 receptor (GDNF alpha-3). This protein can be used to treat e.g. neurodegenerative diseases (such as ParkInson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SMA), Huntington's Disease, Alzheimer's Disease, diabetic neurophy (SMA), muscular diseases (including the muscular dystrophies) and nerve and such erroma and in diagnostic assays for such conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid encoding ret receptor ligands and related proteins vectors, transformed cells and antibodies, used for promoting cell growth and improving survival of injured cells, especially renal or

Purified fibulin, DNA encoding it and antibodies reactive with it useful as diagnostic and therapeutic component.

Sclaim 10; Fig 4; 56pp; English.

Claim 10; Fig 4; 56pp; English.

The fibulin A, B and C forms are identical from their N-terminals to a divergence point at poss. 566 (terminal codon in fibulin A)

and divergence point at poss. 566 (terminal codon in fibulin A)

and 683 residues resp. All three forms are rich in cysteine (11 %) and analysis with on. and spacing of the Cys residues revealed two cys research of the Cys residues revealed two cys residues. The same motif is found in a possible and the cysteine (11 %) and possible acking two Cys residues. The same motif is found in albumin, vitamin D-binding protein and alpha fetoprotein. The type II motif, related to repeats found in epidermal growth catcor precursor is a 6-Cys pattern repeated in the times, although the ninth repeat in the A form is incomplete. Four of the repeats, (2, 3, 4 and 9) differ from the EGF-like motif in having a 4-6 consensus sequence consensus O-glycosylation sequence, CXCXCC.

Immediately following each repeats is a pentapeptide with the consensus sequence XD(I/V)(D/N)E. Fibulin binds to the cytor reconstrict in a pation dependent branch consensus of plasmic domain to fit he warm of the repeat of the cytor or a plasmic domain of the betal submit of integrin adhesion the presented or plasmic domain of the betal submit of integrin and so the cytor or contains and so the cytor or contains and so the presented the presented to the plant of the betal submit of integrin and so the cytor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        receptors in a cation-dependent, EDTA-reversible manner. It can be used to manipulate adhesion of cells to fibronectin, collagen, laminin, and possibly also other proteins. Antibodies reactive with the protein have important diagnostic and therapeutic uses. See also R11147, R11148 and R11150.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ĥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human fibulin type 1 isoform (variant B).

single residue. Embodied within repeats 5, 6, 7 and 8 is the consensus sequence for Asp and Asn hydroxylation. The 7th repeat contains the consensus O-glycosylation sequence, CXCXFC.
Immediately following each repeat is a pentapeptide with the consensus sequence XD(I/V)(D/N)E. Fibulin binds to the cytoplasmic domain of the betal subunit of integrin adhesion receptors in a cation-dependent, EDTA-reversible manner. It can be used to manipulate adhesion of cells to fibronectin, collagen, laminin, and possibly also other proteins. Antibodies reactive suit the protein have important diagnostic and therapeutic uses. See also RIL147, RIL149 and RIL150.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 40.175; Variance 83.764; scale 0.480

Mean 27.574; Variance 124.910; scale 0.221 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 41.468; Variance 75.472; scale 0.549

BLOOD 89:3253-3262(1997).

-I- FUNCTION: THE GPIB-V-IX COMPLEX FUNCTIONS AS THE VON WILLEBRAND FACTOR-DEFENDENT PLATELET ADHESION TO BLOOD VESSELS. THE ADHESION OF PLATELETS TO INJURED VASCULAR SURFACES IN THE ARTERIAL CIRCULATION IS A CRITICAL INTIMATING EVENT IN HEWOSTASIS (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

-I- SUBLICARITY: THE REPEARTED LEGCINE-RICH (LRR) SEGMENT IS FOUND IN MANY PROTEINS. NUMBER IN THIS PROTEIN: 15.

"A phosphatidylinositol/phosphatidylcholine transfer protein is

required for differentiation of the dimorphic yeast Yairowia

I ipolytica from the yeast to the mycelial form.";

J. CELL BIOL. 124.113.127(1994).

C. I- FUNCTION: REQUIRED FOR TRANSPORT OF SECRETORY PROTEINS FROM THE

GOLGI COMPLEX. CATALYZES THE TRANSFER OF PHOSPHATIDYLINOSITOL AND

PHOSPHATIDYLCHOLINE BETWEEN MEMBRANES IN VITRO.

C. I- SUBCELLULAR LOCATION: ASSOCIATED WITH THE GOLGI COMPLEX AS A

PERIPHERAL MEMBRANE PROTEIN (BY SIMILARITY).

C. I- SIMILARITY: BELONGS TO THE SEC14 CYTOSOLIC FACTOR FAMILY.

MULLDORF U., KLOTER U., GEHRING W.J.;
HOMOLOGY Of the eyeless gene of Drosophila to the Small eye gene in mice and Aniridia in humans.";
SCIENCE 265:785-789(1994).

-I-FUNCTION: INVOLVED IN EXE MORPHOGENESIS.
-I-TISSUE SPECIFICITY: EXPRESSION IS CONFINED TO THE EYE IMAGINAL DISCS, PARTS OF THE BRAIN, THE VENTRAL GANGLION AND THE SALIVARY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
